

Download Dressed To Kill The Link Between Breast Cancer And Bras

A general surgeon by training and a pioneer in the development of regional trauma systems, DR. JOHN G. WEST became fascinated with the multidisciplinary team approach to breast cancer care in the mid 1980s. The most dramatic results were recorded among pre-menopausal women. In this group, women who had the highest levels of cysteine were more than 75 percent less likely to develop breast cancer than those with the lowest cysteine levels. The Relationship Between Blood pH and Cancer. Our pH is measured on a scale ranging from 0-14 with 0 being the most acidic and 14 being the most alkaline. Fibrocystic breast disease, for many women, is very treatable and preventable. Recent research has offered new hope because it has shown a strong connection between the wearing of bras and benign fibrocystic lumps, cysts and pain.
